

## Assignment 1: Function Call Tracing

### Task -1: Understanding Variable Scope

**Task:** Write a function `calculateSum` that calculates the sum of two numbers and demonstrates local variable scope.

- Define the function `calculateSum(a, b)`.
- Inside the function, calculate the sum of `a` and `b`, store it in `sum`.
- Return the sum.
- Call the function and print the result.

Do Not submit this line of code in the assignment, but execute the below statement for your understanding.

- Print `sum` outside the function

Sample input:

5

10

Sample output:

15

Explanation:

- $5+10=15$
