Writing a Function to Greet a User

Task: Write a user-defined function `introduce(name, age)` that takes a name and age as arguments and prints a message:

- Define the function `introduce(name, age)`.
- Inside the function, print a message like "My name is [name] and I am [age] years old."

Input Format:

Gowtham

25

Output Format:

My name is Gowtham and I am 25 years old
