Input Functions

Task 3: Convert Integer to Float and Multiply

Question:

Write a program that converts an integer to a float, multiplies it by 1.5, and prints the result.

Input Format:

- A single line of input containing an integer.

Output Format:

- The result of multiplying the converted float by 1.5.

Example:

Input:

3

Output:

4.5

Explanation:

- The input 3 is converted to 3.0(float) and then multiplied by 1.5 to produce 4.5.
